University of Nottingham - Admin Guide

Complete administration guide for managing the Nottingham AEM Edge Delivery Services project. This document supersedes any prior version and reflects the current state of the project.

Overview

This project migrates content from `nottingham.ac.uk` to Adobe Experience Manager Edge Delivery Services. Content is authored in the **Universal Editor** (AEM Sites as a Cloud Service) and delivered through Edge Delivery Services. Document Authoring uploads are handled via `admin.da.live`, and publishing is orchestrated through `admin.hlx.page`.

Setup type: Standard (single site, GitHub-backed code repository).

Migrations delivered so far: Homepage, the Study With Us family of pages, Open Days, and `study/home`.

Quick Reference

URLs

Purpose	URL
Login	https://admin.hlx.page/login/polizzigaetano/nottingham-ac
Config Service	https://admin.hlx.page/config/polizzigaetano/
Production Preview	https://main-nottingham-ac-polizzigaetano.aem.page/
Production Live	https://main-nottingham-ac-polizzigaetano.aem.live/
Feature Preview	https://{branch}-nottingham-ac-polizzigaetano.aem.page/
Code Repository	https://github.com/polizzigaetano/nottingham-ac (main branch)

Project Coordinates

Property	Value
Config Service Organization	polizzigaetano
Site Name	nottingham-ac
Code Owner / Repo	polizzigaetano / nottingham-ac
Default Branch	main
Content Source	Universal Editor (AEM Sites as a Cloud Service)
Content Source URL	https://author-p151992-e1858597.adobecloud.com/bin/franklin.delivery/polizzigaetano/nottingham-ac/main

Credentials & Authentication

Credentials for admin operations are **injected automatically** when the Settings LLM-permission opt-in is enabled.

Important rules: - Never request, store, paste, or commit auth tokens, API keys, or passwords. - If any Admin API call returns **401 Unauthorized** or **403 Forbidden**, this means the opt-in is not active. Tell the user to **enable the Settings LLM-permission opt-in** rather than supplying a token manually. - All examples below assume the credential is already injected; the `x-auth-token` placeholder illustrates the header the platform sets for you.

Login

1. Open: `https://admin.hlx.page/login/polizzigaetano/nottingham-ac`
2. Sign in with your Adobe ID.
3. The auth token is managed by the platform for API operations.

Logout

```
curl -X POST \
  -H "x-auth-token: $AUTH_TOKEN" \
  "https://admin.hlx.page/logout/polizzigaetano/nottingham-ac/main"
```

User Management

Access is managed through the Config Service. The current administrator on record is `gpolizzi@adobe.com` (role: `admin`, `requireAuth: auto`).

View Current Access

```
curl -H "x-auth-token: $AUTH_TOKEN" \
  "https://admin.hlx.page/config/polizzigaetano/sites/nottingham-ac/access.json"
```

Add User

Role	Command
Admin	<code>POST /config/polizzigaetano/sites/nottingham-ac/access/admin.json</code> with body <code>{"users": ["email"]}</code>
Author	<code>POST /config/polizzigaetano/sites/nottingham-ac/access/author.json</code> with body <code>{"users": ["email"]}</code>

Remove User

```
curl -X DELETE \
  -H "x-auth-token: $AUTH_TOKEN" \
  "https://admin.hlx.page/config/polizzigaetano/sites/nottingham-ac/access/admin/{email}.json"
```

Roles

Role	Capability
Admin	Full control: manage access, configuration, publishing, cache, code sync
Author	Author and preview content in the Universal Editor; request publishing

Content Operations

Content is authored in the Universal Editor. Document Authoring assets are uploaded to `admin.da.live`, and preview/publish flow through `admin.hlx.page`.

Preview

Operation	Endpoint
Single page	POST <code>/preview/polizzigaetano/nottingham-ac/main/{path}</code>
Bulk preview	POST <code>/preview/polizzigaetano/nottingham-ac/main/*</code>

Publish

Operation	Endpoint
Single page	POST <code>/live/polizzigaetano/nottingham-ac/main/{path}</code>
Bulk publish	POST <code>/live/polizzigaetano/nottingham-ac/main/*</code>
Unpublish	DELETE <code>/live/polizzigaetano/nottingham-ac/main/{path}</code>

Example (publish the homepage):

```
curl -X POST \  
  -H "x-auth-token: $AUTH_TOKEN" \  
  "https://admin.hlx.page/live/polizzigaetano/nottingham-ac/main/index"
```

Cache Management & Purge

Operation	Endpoint
Purge path	POST <code>/cache/polizzigaetano/nottingham-ac/main/{path}</code>
Purge all	POST <code>/cache/polizzigaetano/nottingham-ac/main/*</code>

Publishing a page automatically purges its CDN cache. Use an explicit cache purge when content appears stale after a configuration change or when assets have been replaced under the same path. If a purge does not take effect, retry with `{"forceUpdate": true}` in the request body.

Sitemap

Edge Delivery Services generates the sitemap from published content. The sitemap is served at:

- Live: <https://main-nottingham-ac-polizzigaetano.aem.live/sitemap.xml>

Sitemap generation is driven by the site configuration and the set of published pages. After large publishing batches (for example completing a page family migration), verify the sitemap reflects the new paths.

Redirects

Redirects are managed via a redirects spreadsheet/table in the content source and applied by Edge Delivery Services.

Planned rollout item: A legacy .aspx -> clean-path redirect map is planned but not yet fully rolled out. As the migration progresses from the legacy nottingham.ac.uk URLs to clean Edge Delivery paths, this map will ensure old bookmarked and search-indexed .aspx URLs resolve to their new equivalents. Track and stage these entries alongside each page-family migration so no legacy URL is orphaned at cutover.

Code Operations

Code lives in GitHub at [polizzigaetano/nottingham-ac](#). AEM Code Sync automatically deploys pushes to branches, making them available on the corresponding preview environment.

Manual Code Sync

```
curl -X POST \
  -H "x-auth-token: $AUTH_TOKEN" \
  "https://admin.hlx.page/code/polizzigaetano/nottingham-ac/main"
```

Publishing Workflow

1. Push changes to a **feature branch**.
2. **AEM Code Sync** automatically processes the branch, making it available on the feature preview environment: <https://{branch}--nottingham-ac--polizzigaetano.aem.page/>.
3. Run a **PageSpeed Insights** check against the feature preview URL and fix issues, targeting a score of **100**.
4. Open a **pull request** to **main**, including a feature-preview link to a page that demonstrates the change.
5. A human reviewer inspects the code and the provided URL, then **merges** the PR.
6. AEM Code Sync updates the **main** branch for **production**.

Common Tasks

Task	Steps
Add new admin	POST to <code>/config/polizzigaetano/sites/nottingham-ac/access/admin.json</code> with the user's email
Republish entire site	POST <code>/preview/polizzigaetano/nottingham-ac/main/*</code> then <code>/live/polizzigaetano/nottingham-ac/main/*</code>
Clear all cache	POST <code>/cache/polizzigaetano/nottingham-ac/main/*</code>
Deploy code changes	Push to branch (auto-sync) or POST <code>/code/polizzigaetano/nottingham-ac/main</code>
Unpublish a page	DELETE <code>/live/polizzigaetano/nottingham-ac/main/{path}</code>

Task	Steps
Verify a feature branch	Open <code>https://{branch}--nottingham-ac--polizzigaetano.aem.page/</code>

Troubleshooting

Issue	Solution
401 Unauthorized	Credential not injected — enable the Settings LLM-permission opt-in (do not supply a token manually)
403 Forbidden	Insufficient permissions or opt-in disabled — check role and enable the opt-in
404 Not Found	Check org/site/path spelling; confirm the page has been previewed/published
429 Rate Limited	Wait and retry
Cache not clearing	Retry the purge with <code>{"forceUpdate": true}</code>
Code not syncing	Trigger a manual sync: <code>POST /code/polizzigaetano/nottingham-ac/main</code>
Legacy .aspx URL 404s	Add the path to the planned .aspx -> clean-path redirect map
PageSpeed below 100	Inspect the feature preview URL in PageSpeed Insights and address flagged issues before merging
